

LIBRARY GUIDE

Tech Team SOP Library

How the library is organised, what to read first, and how to use it on every task

EW-TECH-00 · v1.0 · 2026-09-10
Owner: Brad Palmer · For: Every tech contractor

WHAT THIS IS

This is the front door to the Easyworks Tech Team SOP Library. It tells you what each document is for, which one to open for the task in front of you, and how to read the library in your first day and first week. Every build we do for a client follows one of these documents.

DONE MEANS

You can find the right SOP for any task in under a minute, you know the three gates Brad holds, and you know what to do when an SOP looks wrong.

01 What the library is

The library follows the same path as a client build. Gold box = a gate only Brad or Cash can pass.

Brad	Cash	Technical Builder	Web Developer	Automation Dev
Owns the library. Approves scope, QC and escalations. Updates every SOP.	Head of Sales. Approves tasks at the QC gate with Brad.	GHL builds plus code with AI tools. Lives in 04 to 09.	Client sites, funnels, local SEO. Lives in 07 and 09.	Integrations, AI receptionist, client agents. Lives in 06, 08, 10.

Easyworks sells results to local businesses: more calls answered, more leads followed up, more appointments booked. The offer is Audit, then Build, then Maintain. The tech team builds what the audit scoped. This library is how we build it the same way every time.

Each SOP is a standalone PDF. It opens with a diagram of the whole process and a strip showing who does what. It teaches the procedure as numbered steps with a testable end state. It ends with a Definition of done checklist and a table for when things go wrong. If you follow the steps and tick the checklist, your task will pass QC.

TIP

Every task on The Bench links to the SOP it follows. Open the SOP before you start, not after you get stuck.

02 The map

Code	Title	Use it when
EW-TECH-00	Tech Team SOP Library	You are new, or you cannot remember which SOP covers a task.
EW-TECH-01	How We Work: The Bench and the task flow	Your first login, working any task, what done means, when to hit Blocked.
EW-TECH-02	Access and Security	You need access to anything, you are asking a client for access, or you think a credential leaked.
EW-TECH-03	Client Onboarding and the 7 Day Build	A build has been scoped and paid and a new client is starting.
EW-TECH-04	GHL Sub-Account Baseline Build	A new client sub account needs the standard fields, tags, values, pipeline and calendars.

Code	Title	Use it when
EW-TECH-05	GHL Automations Playbook	Missed call text back, follow up sequences, reminders, reactivation, any workflow.
EW-TECH-06	AI Suite: Voice AI and Conversation AI	Setting up or tuning the AI receptionist and chat, and the booking it does.
EW-TECH-07	Websites, Funnels and Local SEO	A client site, landing page, form, Netlify deploy, or Google Business Profile work.
EW-TECH-08	Integrations, Webhooks and AI-Assisted Code	Anything between systems: webhooks, serverless functions, scripts, API calls, working with Claude Code.
EW-TECH-09	QA and the Go-Live Gate	Your task is built and you are about to move it to Ready for review.
EW-TECH-10	Client AI Agents: the Agentic Foundation (advanced)	You are assigned to a client agent build. Advanced, Automation Dev only, with Brad.

Reference other SOPs by code and title in your task notes, for example "followed EW-TECH-05 GHL Automations, step 4". It makes QC faster because Brad can check the exact step.

03 Reading order for a new builder

Day 1

- 1 Read EW-TECH-00 (this document)**
Ten minutes. You now know the map.
- 2 Read EW-TECH-01 How We Work**
This is the one document everyone must know cold.
End state: you can explain the task flow, the Blocked rule, and why only Brad or Cash mark a task done.
- 3 Read EW-TECH-02 Access and Security**
Read the hard rules twice.
End state: you know you will never be sent a password, and you know what to do if you see one.
- 4 Log in to The Bench and finish onboarding**
easyworks.ai/team/work with your access code. Details, sign the three documents, the four card tour.
End state: you can see the Work board and your first task.
- 5 Open the SOP linked on your first task**
Read the whole thing before you press Start. Your first task is a low risk P3 chosen so you learn the flow on something safe.

Week 1

- 1 Read the SOPs for your role**
Technical Builder: 03, 04, 05, 09, then 06 and 08.
Web Developer: 03, 07, 09, then 08.
Automation Dev: 03, 05, 06, 08, 09, then 10.
- 2 Skim the rest**
You do not need to know every SOP in detail, but you should know what each one covers so you can find it.
- 3 Work two or three tasks end to end**
Follow the SOP, tick the Definition of done, move each to Ready for review.
Expect tighter review than normal on these. That is how the bar gets set.

- 4

Post an EOD note on every working day
One line in the task notes: what moved, what is next. This habit is checked in week one.
- 5

Flag anything in an SOP that was wrong or thin
Say it in the task notes. See section 04 below.

04 How versions work

Every page footer shows three things: the document code, the version, and the date. For example, EW-TECH-04, v1.0, 2026-09-10. When Brad changes a procedure the version number goes up and the date changes.

Current copy	The PDF on the shared Drive and the one linked from The Bench is always the current one. Do not keep old copies on your machine.
Version	v1.0 is the first release. Small fixes move to v1.1, v1.2. A rewrite moves to v2.0.
Owner	Brad Palmer owns every document in this library. Only Brad publishes a new version.

If you find an SOP that is wrong

- 1

Say so in the task
Write what you found in the task notes: the SOP code, the step, what actually happens, what you did instead.
- 2

Keep working if you safely can
If the fix is obvious and low risk, do it the right way and note it. If it could break a client system, hit Blocked instead and wait.
- 3

Brad updates the SOP
Brad reviews your note at QC, updates the document, and publishes the new version. Your note is how the library gets better.

RULE
The SOP updated if the task taught us something is part of the Definition of done on every task. A task that quietly worked around a bad SOP is not done.

05 The three gates and the operating rule

Brad holds three gates and nothing else. Everything outside these gates, the team solves.

Gate	What it means	What you do
1. Scope approval	No build starts until Brad approves the scope from the audit.	Never add to scope on your own. New asks from a client go in the task notes for Brad.
2. Go live QC	Every task moves to Ready for review. Only Brad or Cash mark it done. Nothing ships to a client without passing this gate.	Test as the client would, attach proof, move to review. Never tell a client something is live.
3. Escalations	Blocked tasks ping Brad instantly.	Hit Blocked early, say why, move to your next task.

THE ONE LINE OPERATING RULE
Brad holds scope, QC and escalations. The team solves everything else. If Brad is doing work outside these gates, a role is missing or an SOP is thin.

06 You are ready when

You are ready when

- ☐ You have read EW-TECH-00, 01 and 02 in full.
- ☐ You can name the three gates without looking.
- ☐ You have finished onboarding on The Bench and can see the Work board.
- ☐ You know which SOPs belong to your role and where the current PDFs live.
- ☐ You know how to report a wrong SOP (in the task notes, then Brad updates it).
- ☐ You have opened the SOP linked to your first task before pressing Start.

When it goes wrong

Symptom	First three checks	Who to tell
I cannot find an SOP for my task	1. Check the map in section 02. 2. Check the task for a linked SOP. 3. Check the nearest SOP (most work is 04, 05 or 07).	Ask in the task notes. Brad picks the SOP or writes one.
Two SOPs seem to say different things	1. Check which has the newer date in the footer. 2. Check you have the current PDF from Drive or The Bench. 3. Re read the steps, one is usually a special case.	Note both codes in the task. Brad resolves it.
The SOP steps do not match what I see in the tool	1. Is the tool showing a new UI? 2. Are you in the right client sub account? 3. Do you have the access the step assumes?	Note it in the task. If it could break something, hit Blocked.
I cannot open The Bench	1. Code typed all caps exactly as sent. 2. Onboarding steps all complete. 3. Try a different browser or clear the site data.	Message Brad directly, this is the one thing you cannot report in a task.
