

STANDARD OPERATING PROCEDURE

AI Suite: Voice AI and Conversation AI

Setting up a client's AI receptionist and chat so it books,
captures, and hands off correctly

EW-TECH-06 · v1.0 · 2026-09-10

Owner: Brad Palmer · For: Technical Builders and Automation Devs

WHAT THIS IS

This is how we set up the AI receptionist (Voice AI) and the chat agent (Conversation AI) inside a client's GHL sub account. You use it on every AI Suite build and every time a client asks us to change what the agent says. It produces an agent that answers every call, captures the lead, books on the right calendar, and hands off to a human when it should.

DONE MEANS

A test caller can phone the client's number, get answered in the client's voice, be booked on the right calendar, and appear in GHL as a contact with a call summary note. Ten test calls pass and Brad has signed off at the go live gate.

01 The whole flow

Every AI Suite build follows this path. The gold box is the go live gate. Only Brad or Cash pass it.

Brad	Technical Builder	Automation Dev	Client
Approves scope from the audit. Runs go live QC. Owns the prompt standard. Makes any API level change to an agent.	Builds the agent in the GHL UI, wires actions to fields and calendars, runs the test script, attaches proof.	Wires the post call workflows, notifications and any hand off logic. See EW-TECH-05 GHL Automations.	Supplies hours, services, the calendar to book on, and the person who takes transfers.

A receptionist that answers every call is the single most visible thing we sell. When it works, the client hears their phone get answered while they are with a customer. When it fails, they hear it from their own customers. Build it slowly, test it hard, and never tell a client it is live until Brad has passed it.

Everything here happens inside the client's sub account. You need a proper GHL user invite to that sub account and nothing else. Never work in the agency view and never ask for a client password. See EW-TECH-02 Access and Security.

COPY THE REFERENCE BUILD

The Easyworks receptionist on the business line is the pattern. When you are unsure what a setting should be, open the Easyworks agent (read only) and copy the shape, then change the business facts to the client's.

CONFIRM WITH BRAD

This document is v1 of the AI Suite setup procedure. Brad records his next builds on screen and the exact clicks land here in later versions. If a label in GHL does not match what you read, note it in the task and keep going.

02 What the receptionist may and may not say

The prompt is the product. A client will forgive a slightly robotic voice. They will not forgive an agent that quotes a price they never set or promises a result they cannot deliver. Every prompt we write follows the same standard.

Every prompt must contain

Block	What goes in it	Where you get it
Identity	Agent name, the business name, one line on what the business does, the tone (warm, short, professional).	Client intake form. Match the name the client uses on their signage and website.
Hours and location	Opening hours by weekday, address if customers visit, service area if they travel.	Client, then check it matches the website and Google Business Profile exactly.
Services	The short list of services the business offers, in the client's words. Nothing they do not offer.	Client intake form. If in doubt, leave it out and let the agent offer to book.
The goal	Book an appointment on the named calendar. Every conversation steers there.	Scope sheet from the audit.
What to capture	First name, last name, phone, email, and the one or two fields the client needs (service wanted, how they heard about us).	Scope sheet. Keep it under six fields or callers hang up.
Escalation	Who to transfer to and when. What to say when nobody answers the transfer.	Client names one person and one backup.

The hard rules for every agent

NO PRICES UNLESS THE CLIENT SET THEM

The agent never quotes a price unless the client wrote that exact price into the prompt. If a caller asks, the agent says pricing depends on the visit and offers to book. This applies to every client and to Easyworks itself.

NO MEDICAL OR LEGAL CLAIMS

The agent never gives medical, dental, legal or financial advice, never diagnoses, and never says whether a treatment or a case will work. It books the caller with the professional. For clinics this is a compliance issue, not a style choice.

ALWAYS OFFERS TO BOOK

Every call ends with an offer to book. Wrong number, price question, complaint, general enquiry. The offer is always there and it is always polite.

ESCALATE TO A HUMAN

If the caller asks for a person, is upset, or asks something the prompt does not cover, the agent offers to transfer or to have someone call back. It never argues and never invents an answer.

EASYWORKS OWN AGENT

The Easyworks receptionist follows the Offer v3 language: every engagement starts with an audit, the agent never says "free consultation" or "free audit", never quotes a price, and escalates anything commercial to Brad. Start with an audit is the only call to action.

Write the prompt in plain sentences. Short lines. No lists of twenty rules the model will forget. Tell it who it is, what it knows, what it does, and what it never does. Then test it against the script in section 07 and fix the prompt, not the caller.

03 The reference build: the Easyworks receptionist

Easyworks runs its own Voice AI agent on the business line, +1 604 265 7660. It is the shape every client build copies. The business facts change, the shape does not.

Agent	Named Maya. Business is Easyworks AI Solutions, time zone America/Vancouver.
Goal	Book a call on the Discovery Call calendar.
Captured during the call	First name, last name, email, business name.
Captured after the call	Phone (from caller ID) and industry, written to contact fields by post call actions.
Call summary	Written as a note on the contact so anyone opening the record sees what was said.
Notifications	Post call email notification to admins is ON, so the team hears about every call.
Prompt	Follows Offer v3. Audit first, never quotes prices, never says free consultation, escalates to Brad.
How it is updated	Prompt and settings can be changed in the UI. Brad also updates the agent through the API with the sub account token. Contractors change prompts in the UI only, inside a task.

TIP

The Easyworks receptionist exists so a new client can hear a working example on a real line. Call it before your first build. Listen to how it greets, how it asks for details, how it closes with a booking.

04 Build Voice AI in GHL, step by step

Before you start you need: a phone number in the client's sub account, the calendar the agent books on (built and tested, see EW-TECH-04), the custom fields the agent writes to, and the prompt approved in the task by Brad.

1**Check the number**

Settings, Phone Numbers. Confirm the client's number is in this sub account and can receive calls. Call it from your phone.

End state: the number rings through to the sub account and shows in the conversation view.

2**Open AI Agents, then Voice AI, and create the agent**

Give it the client's chosen name. Pick a voice the client agreed to on the kickoff call. Set language and time zone to the client's.

End state: the agent exists and opens without errors.

3**Fill in business information**

Business name, hours, address or service area, website. This is what the agent reads before every call.

End state: every fact matches the website and Google Business Profile word for word.

4**Write the greeting**

One sentence. Business name, agent name, an offer to help. For example: Thanks for calling Bright Smile Dental, this is Ava, how can I help you today?

End state: the greeting is under ten seconds when spoken.

5**Paste the approved prompt**

Use the standard in section 02. Identity, hours, services, goal, capture list, escalation, the hard rules.

End state: the prompt in the agent matches the prompt in the task, no edits of your own.

6**Add the capture actions**

One action per field. Map first name, last name, email and phone to the standard contact fields. Map anything extra to the custom fields from the baseline build.

End state: each action names the exact field it writes to.

7**Add the booking action**

Attach the client's booking calendar. Confirm the calendar has availability hours, a buffer, and a connected Google or Outlook calendar if the client uses one.

End state: a test booking from the action lands on the calendar and blocks the slot.

8

Add the transfer action

Transfer to the person the client named. Add the condition (caller asks for a person, caller is upset, caller asks something outside scope). Set what the agent says if the transfer is not answered.

End state: a test transfer rings the right phone.

9

Attach the number and choose primary or backup

Assign the agent to the number. Primary means it answers every call. Backup means it answers only if nobody picks up within the set seconds. Most clients start on backup so staff still answer when they can.

End state: the task notes say which mode and why.

10

Turn on notifications

Post call email notification to the client's admin email and to the Easyworks team mailbox. Make sure the call summary is written as a contact note.

End state: a test call produces an email and a note within a minute.

11

Run the ten call script

Section 07. Fix the prompt between calls, not the caller. Attach the recordings or screenshots to the task.

12

Move the task to review

Brad or Cash test call it themselves. Only after that does the client hear the word live.

CONFIRM WITH BRAD

Exact menu labels in GHL change between releases. The order above is the order that works. If a label differs, follow the meaning and note the new label in the task so the SOP is updated.

WATCH OUT

Never assign an agent to a client's number as primary before the test script passes. A half built agent answering real customer calls is the fastest way to lose a client.

Conversation AI for SMS, web chat, Instagram and

05 Facebook

Conversation AI is the text version of the receptionist. Same prompt standard, same goal, same hard rules. The difference is that it answers on whatever channel the customer used: SMS, the website chat widget, Instagram DMs, Facebook Messenger.

1

Confirm the channels are connected

Settings, Integrations for Facebook and Instagram. The chat widget installed on the site (see EW-TECH-07). SMS needs a number with texting enabled and, for US clients, A2P registration.

End state: a test message on each channel shows up in the GHL conversation view.

2

Set the intent

The bot's job is to answer the question in one or two lines and move to a booking. Give it the calendar. Give it the same capture list as Voice AI.

End state: the bot goal names the calendar.

3

Train it

Add the client's website pages and a short set of question and answer pairs (hours, location, parking, what to bring, how to book). Keep it to what the client actually told you.

End state: the bot answers the top ten customer questions correctly in a test chat.

4

Choose the mode

Start in suggest mode where a human approves each reply. Move to auto mode only after the test chats pass and Brad approves in the task.

End state: the mode is recorded in the task.

5

Set the hand off

When the customer asks for a person, is upset, mentions a complaint, or asks anything outside the training, the bot says a team member will reply and stops. Tag the contact so a human sees it.

End state: a test message saying "I want to speak to a person" produces the hand off and the tag.

6

Set quiet hours behaviour

A customer who texts at 11pm gets an answer. That is fine, it is a reply. The bot never starts a conversation, never sends a follow up, and never clears a backlog during quiet hours (21:00 to 08:00 client local). Follow ups belong to workflows with time windows, see EW-TECH-05.

End state: no outbound message from the bot is ever the first message in a thread.

7

Test on every channel

Ten messages per channel from your own accounts: a booking, a price question, a rude message, a wrong business, a request for a person. Screenshot each.

QUIET HOURS

The bot replies to any inbound at any hour. The bot never initiates during quiet hours. If you find a workflow that lets the bot text first at night, hit Blocked and tell Brad.

06 Knowledge base: do and do not

Do	Do not
Use the client's own words from their website, intake form and kickoff call.	Write services, hours or policies you assume a business like this has.
Keep it short. Ten good answers beat a hundred guesses.	Paste a whole brochure or a competitor's FAQ.
Include what to bring, parking, cancellation policy, how to reschedule.	Include prices, discounts or promotions unless the client wrote the exact wording.
State clearly what the business does not do, so the agent can say so and offer a referral or a booking.	Let the agent guess whether the business does something.
Give the agent the one calendar to book on and the one person to transfer to.	Give it five calendars and let it choose.
Re read the whole knowledge base every time the client changes hours or services.	Edit one line and assume the rest is still true.

TIP

An agent that says "I am not sure, let me book you with the team" is doing its job. An agent that confidently gives a wrong answer is a liability. When in doubt, leave it out.

07 The ten call test script

Run every call from a phone that is not already a contact in the sub account, or delete your test contact first.

Record the result of each call in the task. A build passes when all ten pass on the same version of the prompt.

#	Scenario	What you say	Pass when
1	Happy path booking	I would like to book an appointment for next week.	Agent captures name, phone, email and the extra fields, offers slots, books, confirms the time. Contact and appointment appear in GHL.

#	Scenario	What you say	Pass when
2	Wrong number	Is this the pizza place?	Agent says which business this is, stays polite, offers to help anyway, ends cleanly. No junk contact fields written.
3	After hours	Call outside opening hours. Ask if someone can see you now.	Agent gives the real hours, offers the next available slot, books it.
4	Angry caller	Raise your voice, say you have been waiting for a call back for days.	Agent stays calm, apologises once, offers a transfer or a call back from a named person, tags the contact for a human.
5	Price question	How much is a cleaning? Just give me a number.	Agent never states a price unless the client set one, explains it depends on the visit, offers to book.
6	Transfer request	I need to speak to a real person right now.	Agent transfers to the named person. If unanswered, it says so and takes a call back number.
7	Partial details	Refuse to give your email. Give only a first name.	Agent asks once more, then continues with what it has and still books. No made up email in the record.
8	Out of scope service	Ask for a service the business does not offer.	Agent says clearly that the business does not offer it and offers to book what they do, or to have someone call.
9	Advice question	Ask whether a symptom is serious, or whether a legal case will win.	Agent gives no opinion, says the professional will assess it, offers to book.
10	Existing customer	Say you have an appointment Thursday and need to move it.	Agent finds the contact, offers new slots, reschedules or takes a message for the team. No duplicate contact created.

Before you move to review

- ☐ All ten calls passed on the same prompt version.
- ☐ Every test contact has the right fields, a call summary note, and no duplicates.
- ☐ The post call email arrived for every call.
- ☐ Bookings landed on the right calendar and blocked the slot.
- ☐ Transfers rang the right phone.
- ☐ Recordings or screenshots for all ten are on the task.

08 Definition of done and when it goes wrong

Definition of done

- ☐ Prompt matches the section 02 standard and the version Brad approved in the task.
- ☐ Business facts match the website and Google Business Profile exactly.
- ☐ Capture actions write to the named fields; booking action books on the named calendar; transfer rings the named person.
- ☐ Number attached, mode (primary or backup) recorded in the task with the reason.
- ☐ Call summary note and admin email confirmed on a real test call.
- ☐ Conversation AI connected on every channel in scope, trained, hand off tested, quiet hours respected.
- ☐ Ten call script passed and proof attached.
- ☐ Client state file updated with the agent name, number, calendar, fields and mode (Brad or GuapBot record it, you supply the facts in the task).
- ☐ Task moved to review. Brad or Cash marked it done. Client told it is live only after that.

When it goes wrong

Symptom	First three checks	Who to tell
Calls are not answered by the agent	1. Is the agent assigned to this number? 2. Primary or backup, and is the backup wait too long? 3. Does the number ring through to the sub account at all?	Task notes. If a live client is missing calls, Blocked and Brad now.
Agent books on the wrong calendar or double books	1. Which calendar is in the booking action? 2. Availability hours, buffer and slot interval on that calendar. 3. Connected Google or Outlook sync pulling in busy time?	Task notes, then Brad if the client is live.
Fields are empty after the call	1. Does each capture action map to a real field name? 2. Did the caller actually give the detail? Listen to the recording. 3. Is the field in the right sub account?	Task notes.
Agent quotes a price or makes a claim	1. Search the prompt and knowledge base for the number or claim. 2. Was it in the website pages you trained on? 3. Remove it, retest calls 5 and 9.	Brad the same day. This is a client trust issue.
No post call email or note	1. Notification toggle on and the right email address? 2. Check spam and the conversation view. 3. Does the note action exist and point at the contact?	Task notes.
Chat bot answers at night on its own	1. Was the first message inbound or outbound? 2. Any workflow sending on the bot's behalf? 3. Mode set to auto before approval?	Blocked and Brad now. Quiet hours is a hard rule.
Client says it sounds wrong	1. Get the recording. 2. Compare what was said to the prompt line by line. 3. Change one thing, retest the affected script calls.	Task notes with the recording. Brad approves prompt changes.
